1 - zu Seite 33

Infos vorraus

$$\sin(90 - \alpha) = \frac{||AB||}{||AC||} = \cos \alpha$$

$AC \triangleq \text{Vector}$
 $|AC| \triangleq \text{Stecke}$
 $||AC|| \triangleq \text{Länge}$

$$\sin \alpha = \frac{Gk}{Hy} = \frac{||BC||}{||AC||} = \frac{||CB||}{||CA||}$$

$$\cos \alpha = \frac{Ak}{Hy} = \frac{||AB||}{||AC||}$$

$$\tan \alpha = \frac{Gk}{Ak}$$

Zwei Dreiecke sind ähnlich wenn deren Winkel gleich gross sind.

$$\Delta ABC \sim \Delta PQR \Rightarrow \frac{||AC||}{||PR||} = \frac{||BC||}{||QR||} = \frac{||AB||}{||PQ||}$$

SATZ DES THALES!!!

Positionen und Gradmass zu Bogenmass

$$360^\circ \triangleq 2\pi$$

$$180^\circ \triangleq \pi$$

$$90^\circ \triangleq \frac{\pi}{2}$$

$$60^\circ \triangleq \frac{\pi}{3}$$

$$45^\circ \triangleq \frac{\pi}{4}$$

$$30^\circ \triangleq \frac{\pi}{6}$$

$$\cos(-\alpha) = \cos \alpha$$

$$\sin(-\alpha) = -\sin \alpha$$

$$\sin(90 - \alpha) = \cos \alpha$$

$$\cos(90 - \alpha) = \sin \alpha$$

$$\sin^2 \alpha + \cos^2 \alpha = 1$$
